## Class: Indications\_and\_Usage\_ATEZO

### Annotations (1)

- `rdfs:comment` "TECENTRIQ is a programmed death-ligand 1 (PD-L1) blocking antibody indicated: Urothelial Carcinoma • for the treatment of adult patients with locally advanced or metastatic urothelial carcinoma who: o are not eligible for cisplatin-containing chemotherapy and whose tumors express PD-L1 (PD-L1 stained tumor-infiltrating immune cells [IC] covering  $\geq 5\%$  of the tumor area), as determined by an FDA-approved test, or o are not eligible for any platinum-containing chemotherapy regardless of PD-L1 status This indication is approved under accelerated approval based on tumor response rate and duration of response. Continued approval for this indication may be contingent upon verification and description of clinical benefit in a confirmatory trial(s). (1.1) Non-Small Cell Lung Cancer (NSCLC) • as adjuvant treatment following resection and platinum-based chemotherapy for adult patients with Stage II to IIIA NSCLC whose tumors have PD-L1 expression on  $\geq 1\%$  of tumor cells, as determined by an FDA-approved test. (1.2, 14.2) • for the first-line treatment of adult patients with metastatic NSCLC whose tumors have high PD-L1 expression (PD-L1 stained  $\geq 50\%$  of tumor cells [TC  $\geq 50\%$ ] or PD-L1 stained tumor-infiltrating immune cells [IC] covering  $\geq 10\%$  of the tumor area [IC  $\geq 10\%$ ] ), as determined by an FDAApproved test, with no EGFR or ALK genomic tumor aberrations. (1.2) • in combination with bevacizumab, paclitaxel, and carboplatin, for the firstline treatment of adult patients with metastatic non-squamous NSCLC with no EGFR or ALK genomic tumor aberrations. (1.2) • in combination with paclitaxel protein-bound and carboplatin for the firstline treatment of adult patients with metastatic non-squamous NSCLC with no EGFR or ALK genomic tumor aberrations (1.2) • for the treatment of adult patients with metastatic NSCLC who have disease progression during or following platinum-containing chemotherapy. Patients with EGFR or ALK genomic tumor aberrations should have disease progression on FDA-approved therapy for NSCLC harboring these aberrations prior to receiving TECENTRIQ. (1.2) Small Cell Lung Cancer (SCLC) • in combination with carboplatin and etoposide, for the first-line treatment of adult patients with extensive-stage small cell lung cancer (ES-SCLC). (1.3) Hepatocellular Carcinoma (HCC) • in combination with bevacizumab for the treatment of patients with unresectable or metastatic HCC who have not received prior systemic therapy. (1.4) Melanoma • in combination with cobimetinib and vemurafenib for the treatment of patients with BRAF V600 mutation-positive unresectable or metastatic melanoma. (1.5)"(`xsd:string`)
