## Class: Warnings\_and\_Precautions\_ALIMT

### Annotations (1)

- `rdfs:comment` "**• Premedication regimen: Instruct patients to take folic acid and vitamin B12. Pretreatment with dexamethasone or equivalent reduces cutaneous reaction. (5.1) • Bone marrow suppression: Reduce doses for subsequent cycles based on hematologic and nonhematologic toxicities. (5.2) • Renal function: Do not administer when CrCl <45 mL/min. (2.4, 5.3) • NSAIDs with renal insufficiency: Use caution in patients with mild to moderate renal insufficiency (CrCl 45-79 mL/min). (5.4) • Lab monitoring: Do not begin next cycle unless ANC  $\geq$ 1500 cells/mm<sup>3</sup>, platelets  $\geq$ 100,000 cells/mm<sup>3</sup>, and CrCl  $\geq$ 45 mL/min. (5.5) • Pregnancy: Fetal harm can occur when administered to a pregnant woman. Women should be advised to use effective contraception measures to prevent pregnancy during treatment with ALIMTA. (5.6)**"(`xsd:string`)
