Annotations (1)

- rdfs:comment ""A total of 570,302 people were eligible for follow-up LCS at T1, although only 127,194 (22.3%) had follow-up examinations. The rate of adherence ranged from 20% to 30% across demographics, but it was particularly low among current smokers, Hispanic or Black individuals, and those with a lower reported education level. Adjusted analyses showed that Black, Hispanic, and Asian individuals were significantly less likely to have at least 1 LCS examination following baseline screening, with adjusted odds ratios of 0.84, 0.73, and 0.79, respectively. Additionally, those in the West or South regions of the United States were less likely to adhere to LCS than those in the Northeast. An added 11.7% of people overall would have been considered adherent if repeat annual screening was extended to 24 months, and 5.9% more would have been adherent after 24 months.""(xsd:string)
